

J&J Management Services

Opportunity

J&J Management Services (JJM) established as a third generation family owned business has a history spanning over 60 years in the consumer lending business specializes in direct lending. Due to government regulation changes, JJM developed a new business model to offer short-term installment loan programs. The company operating on its proprietary lending software needed to transition from deferred-presentment lending to small installment loan lending.

Solution

JJM needed a vendor that could understand specific needs and customize a solution. After an extensive vendor evaluation process, JJM partnered with Compass Technologies to build a custom solution to support the new lending programs and facilitate the transition.

Results

Compass Technologies customized its Encompass software solution to include a cash drawer management system, a full customer relations/collections system, and state-specific, specialized lending programs. As a result, JJM was able to convert from three separate software programs to Encompass and transition all of its office locations from deferred presentment to small installment loan licenses.

Application Solution: EnCompass

Key Features: Cash Drawer Management, Collections, Specialized Lending Programs
